My iOS Internship Journey – Timeline

From Learning to Building – My 5 Month Journey

Project Introduction

The Daily News is a modern iOS news application designed to make reading news simple, engaging, and personalized.

It provides users with a clean interface to discover, explore, and save news from different categories while offering a smooth and visually appealing experience.

Key Highlights

Multi-Category

Browse news across multiple categories

Instant Search

Search articles instantly with no lag

Vertical Explore

Intuitive vertical swiping experience

Offline Access

Read and save articles for offline access

Custom Themes

Personalize the app with multiple themes

Secure Auth

Secure user authentication and credentials

Reading Stats

Track reading habits and daily learning statistics

Reward System

Earn custom badges based on articles read

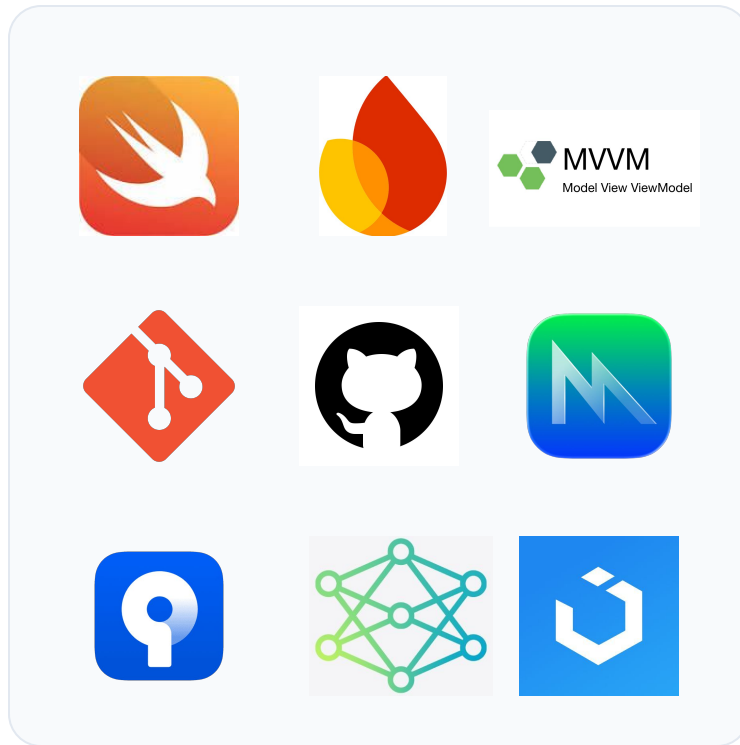

Tech Stack & Tools

Core Technologies

- **Languages & UI:** Swift, UIKit, SnapKit, MetalKit, Core Animation
- **Architecture:** MVVM (Model-View-ViewModel) Design Pattern
- **Services & APIs:** Firebase Authentication, NewsAPI integration

Development Tools

- **IDE:** Xcode environment for native iOS development
- **Version Control:** Git, GitHub for collaborative codebase management
- **Clients:** SourceTree desktop client for streamlined repository workflows

Splash and Onboarding

A smooth and intuitive onboarding experience that introduces the app and enables secure user authentication.

Modern Splash Screen

Clean and polished entry point that welcomes users to the app.

Interactive Onboarding

Engaging walkthrough that introduces the core app value.

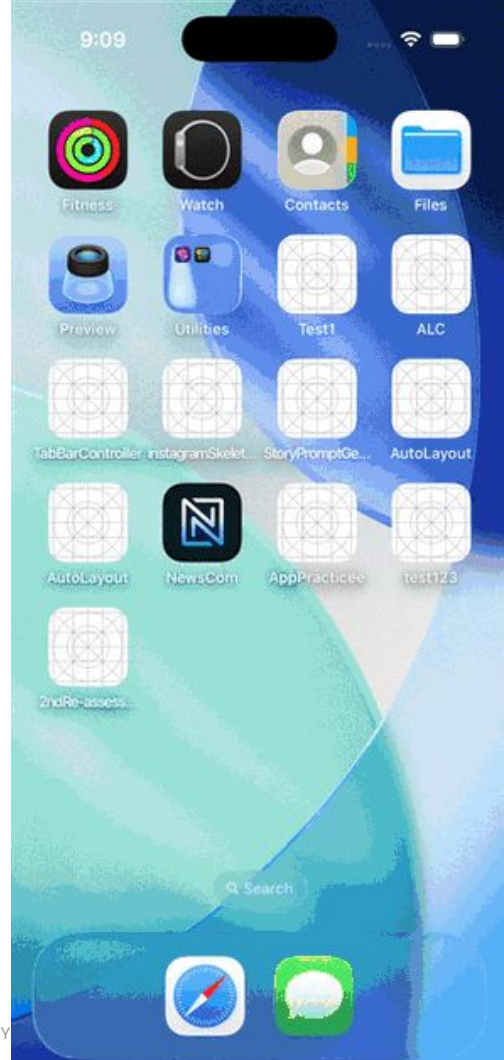

Firebase Authentication

Secure Login & Sign Up to safeguard user credentials.

Quick Home Access (Skip)

Instantly explore the app without mandatory sign-up steps.

Home Screen

Personalized news hub featuring Trending, Breaking, and Latest news, designed for quick and engaging content discovery.

Trending & Breaking

Browse Trending, Breaking, and Latest news effortlessly.

Featured Stories

Swipe through curated, visually engaging featured stories.

Rich Article Reader

Read full news articles in an optimized, clean layout.

Save for Later

Easily bookmark and save key articles to read at your convenience.

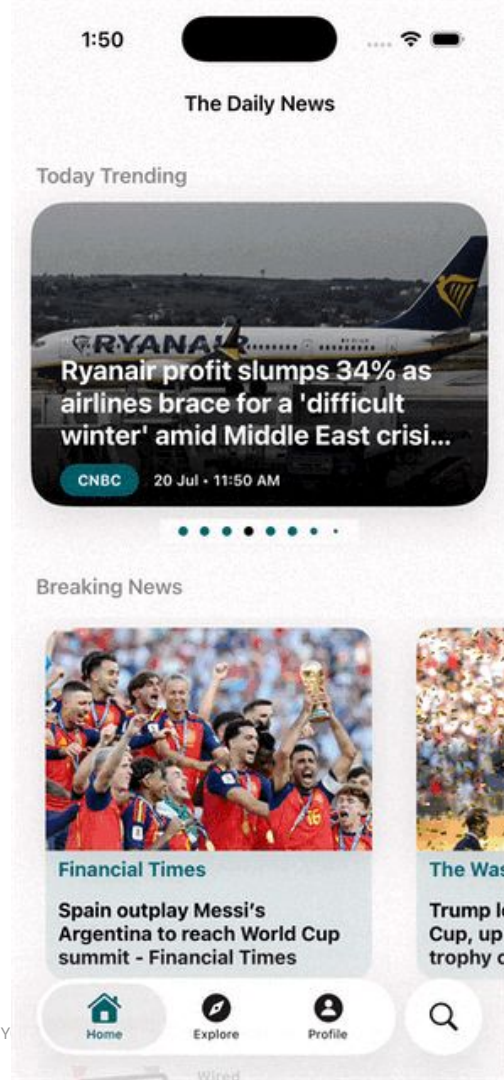

Daily Discovery

Explore daily fun facts and interesting trivia curated for you.

Surprise Me

Find random articles effortlessly that match your potential interests.

Explore Screen

Discover news in an immersive and visually engaging interface with smooth animations for an enhanced browsing experience.

Explore News Content

Browse global and local news content effortlessly.

Animated Surface

Lively and visually interactive user interface elements built with MetalKit.

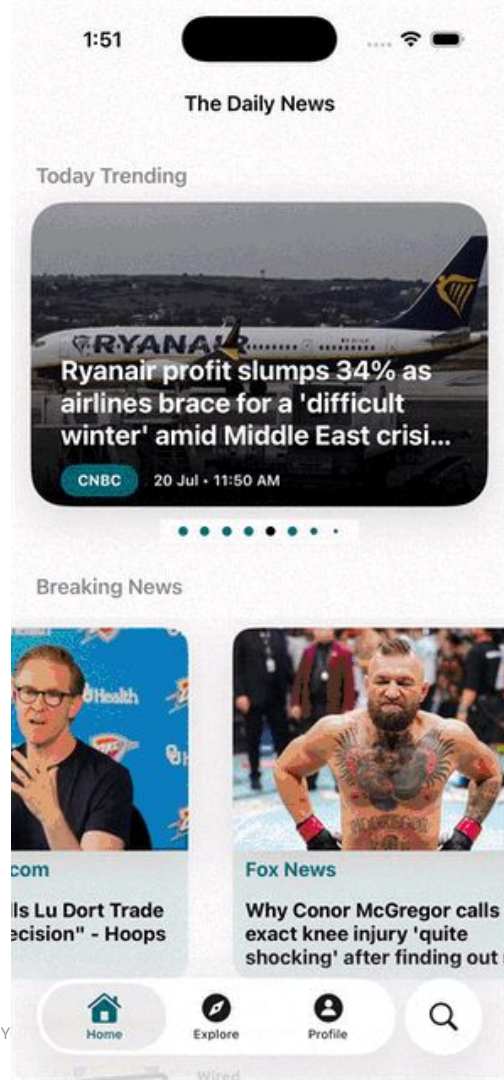

Smooth Scrolling

Fluid transition states and high performance gesture control.

Share & Save Options

Easily share interesting stories or save them for later directly from individual CollectionView cells.

Profile Screen

Manage your account and personalize your app experience from one convenient place.

Set User Preferences

Includes options for setting article length preferences, adjusting double tap preferences

Reading Statistics

Track your daily reading streaks and personal goals.

Saved & History

Access your bookmarks and browsing history anytime.

Customize App Themes

Switch between dark and light modes with custom typographies.

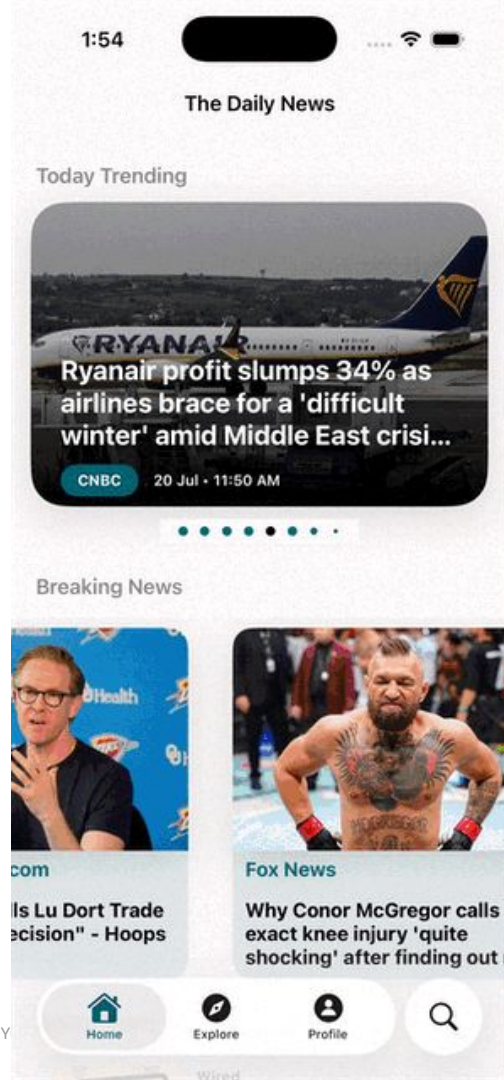

Reward System

Earn badges and exclusive rewards as you read.

Sign Out Securely

Safeguard your sessions with our reliable log out mechanisms.

Search Screen

Quickly find articles with a familiar, native iOS search experience designed for fast and effortless discovery.

Search Instantly

Find articles and trending topics in a fraction of a second.

Instant Updates

Results update dynamically in real-time as you type.

Native iOS Search

Familiar UX designed to fit beautifully into the Apple ecosystem (iOS 26).

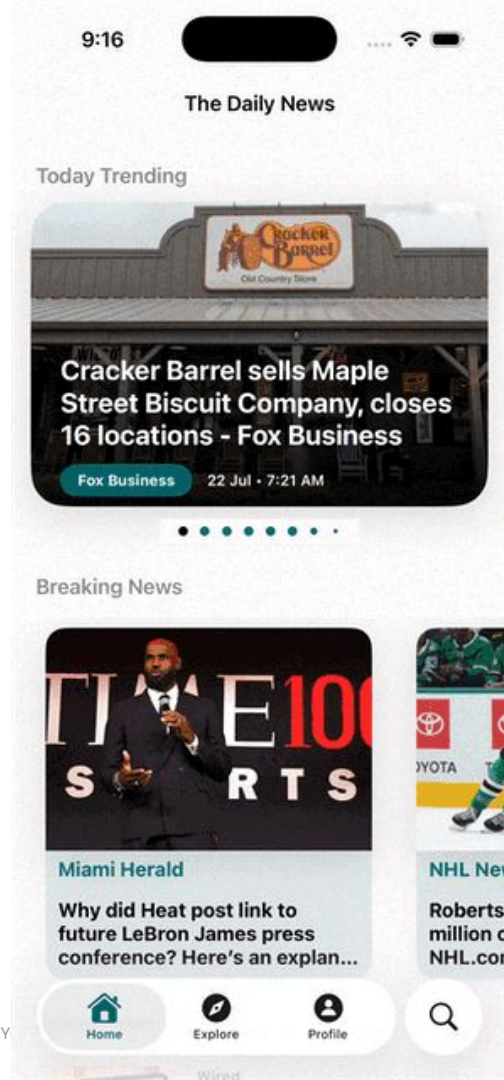

Animated Transitions

Features incredibly smooth animations during tab switches.

Niche Categories

Explore beyond traditional news with dedicated feeds like Anime, Gaming, and Tech.

Interactive Walkthrough

App Demonstration

A complete hands-on showcase of The Daily News interface, highlighting core user journeys, real-time search, and personalization features.

1. User Flow & Splash

Onboarding & authentication

2. Search & Discovery

Native iOS search experience

3. Profile & Settings

Themes and customization

Learnings & Implementations

Swift & UIKit

Reusable UI, view controllers, navigation, delegates & data sources

Auto Layout & SnapKit

Adaptive, constraint-based layouts and reusable components

MVVM Architecture

Separated UI, presentation logic and data responsibilities

REST APIs & Networking

Fetches, decodes and displays live news data

Local Persistence & App State

Saved articles, reading history, reading goals and preferences

Firebase Authentication

Implemented secure Login & Sign Up flows

Animations & Apple Graphics

Metal/MetalKit, CAEmitterLayer, gradients and visual effects

Modern iOS Frameworks

Swift Charts

Design Token (Theme System)

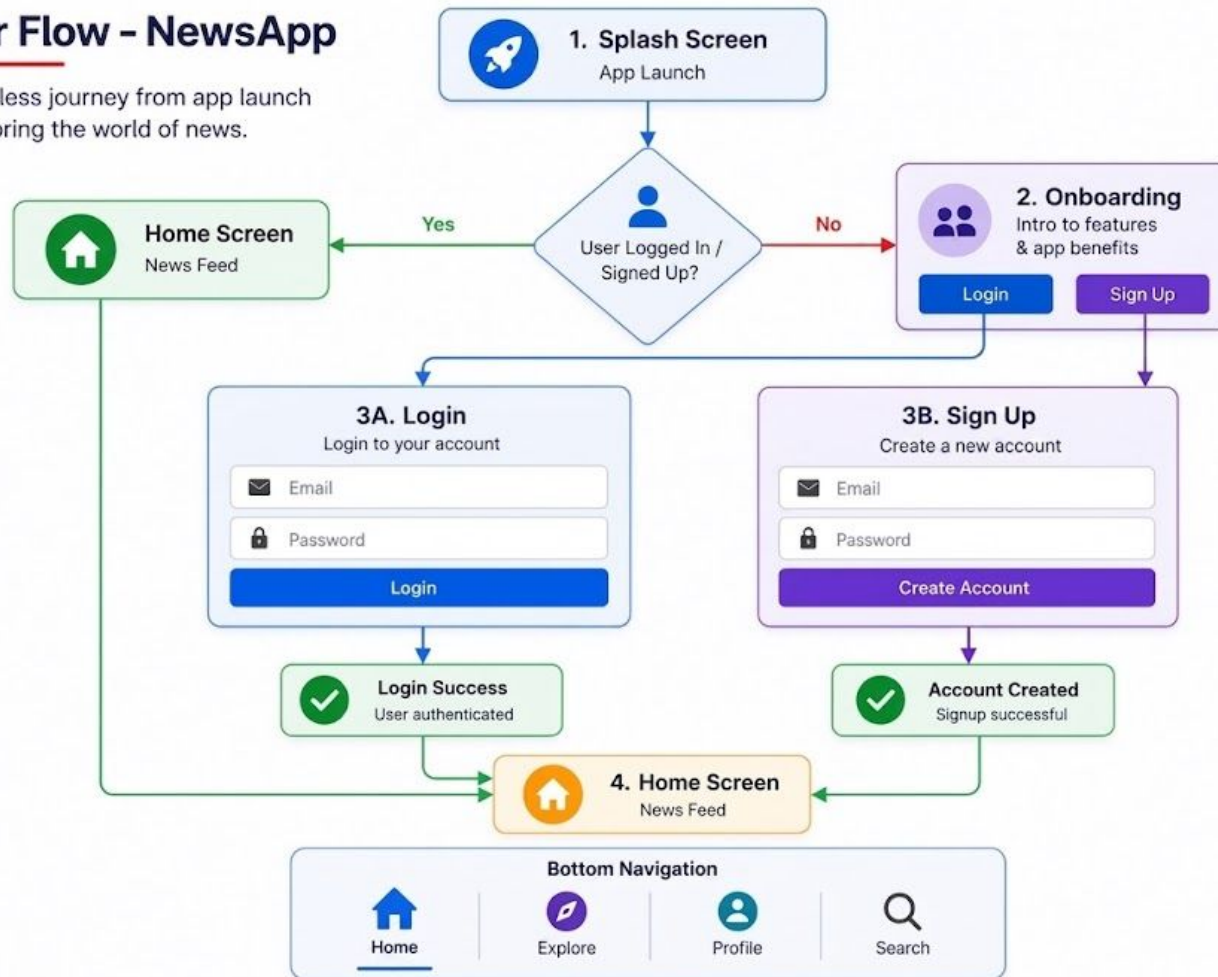

Enabled Light, Dark & Custom themes

Git & GitHub

Managed version control throughout development

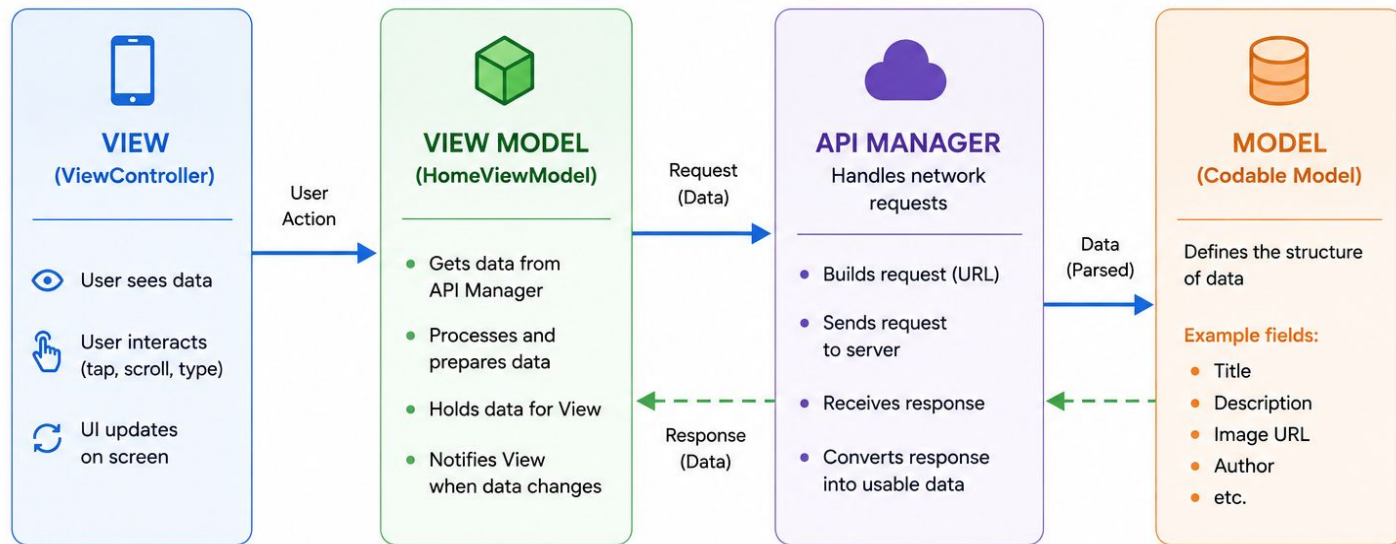

User Flow - NewsApp

A seamless journey from app launch to exploring the world of news.

Architecture (Data Flow)

How data moves in the app

In Simple Words:

User interacts (View)

ViewModel gets and prepares data

API Manager fetches data from server

Data is returned, parsed and used

View updates and shows the data

Request / Data Flow (Forward)

Response / Data Flow (Back)

Future Improvements

AI-Powered Summaries

Generate concise summaries for lengthy articles to save reading time.

Push Notifications

Deliver breaking news alerts and highly personalized updates instantly.

Personalized News Feed

Prioritize content dynamic delivery based on user interests and interactions.

Smart Recommendation s

Suggest relevant articles dynamically based on reading behavior and saved content.
